

THE WALL

# *Every week was the same loop.* **So I stopped buying tools.**

Pull the report. Find the waste. Rewrite the ads.  
Repeat. The only way to do more was to work  
more hours.

**Vinay Kumar**

B2B SaaS marketing • AI systems

*swipe →*

# Their whole method was a **spreadsheet**.

Over 1,300 checks, done by hand, for every client. No tool on the market runs their method — because it's theirs.

*built for a US SEO agency*

**01 Seven tools, one per module.** Six are live and verified against real client pages.

**02 Scores 198 out of 277** — not out of 395. The other 118 checks need data it doesn't have, so it refuses to score them.

**03** It shows you the gap **instead of filling it**. No tool I ever paid for did that.

---

A spreadsheet → **7 tools**

*replaced a rank-tracking subscription*

# It can change a live ad account. **And then it stops.**

Five checks run at once. It writes up every change it wants to make — then waits for a human.

*built at Revv Growth*

**01 Zero changes applied. Awaiting approval.** Every mutation is logged and reversible.

**02** Built for a US collections client, where the same keywords are searched by **CFOs and by people who owe money.**

**03** The machine does the work. **A person makes the decision.**

---

Two days → **20 min**

*CPL down 68% • volume  
up 120%*

# 18 rules run before a human **reads** a word.

AI blogs are cheap. Blogs that get cited by AI  
Overview and ChatGPT are rare — and the  
difference is all in the briefing.

*built at Revv Growth*

01 I sat with the editors who won those citations and **turned how they think into 18 rules.**

02 The strict one: process content must trace to an **internal doc, never internet research.**

03 Every stat gets traced to a real source — **or it gets dropped.**

---

8-12 hrs → **10-20 min**

*one client: 10k →  
200k visits in a year*

# Not whether it worked. **Who it reached.**

Five dashboards, built end to end. FastAPI, SQLite, straight off the platform APIs — backend and frontend both mine.

*built at Revv Growth*

01 A LinkedIn campaign across **893 target companies**. 355 engaging.

02 **5.91% click rate** against a sub-1% B2B benchmark. Roughly six times.

03 And it shows the job titles clicking — **CEO, co-founder, founder**. Almost no ABM report does.

---

Weekly exports → **Always live**

*reporting stopped being  
a task*

# The eye can't be prompted.

So I did the same thing again — wrote down how I think about design, and handed it to the agent.

*film posters · design lead at Revv Growth*

01 I freelance **posters and key art for Telugu cinema**. A weak layout gets seen by a few million people.

02 A reference bank of creative that converted, a design system, and **five execution skills**.

03 Never starts from a blank prompt. **This carousel was built with it.**

---

A prompt  
box

**A design  
pack**

*no purple gradients, no  
Inter*

# *The tools weren't the problem.*

## **The loop was.**

Every tool I tried did the easy 20% and handed the judgment back to me. That's the part that was eating my week.

### *If you're hiring*

Six years in B2B SaaS marketing, one year building the tooling.

**Currently looking for my next role.**
